Problem

A geographically large campus with many groups of students have to implement an announcement system.

Conventional System

- 1 No **Flexibility** in selection of audience.

Conventional System

- 1 No **Flexibility** in selection of audience.
- 2 Requires **heavy cableing** around the campus.

Conventional System

- 1 No **Flexibility** in selection of audience.
- 2 Requires **heavy cableing** around the campus.
- 3 Limited **scalability and extentability**.

Conventional System

- 1 No **Flexibility** in selection of audience.
- 2 Requires **heavy cableing** around the campus.
- 3 Limited **scalability and extentability**.

VoIP

VoIP *is a family of technologies, methodologies, communication protocols, and transmission techniques for the delivery of voice communications and multimedia sessions over Internet Protocol (IP) networks, such as the Internet.*

- **Wikipedia.org, Accesed February 2, 2012**

Advantages

- 1 Each client can be addressed individually.

Advantages

- ① Each client can be addressed individually.
- ② Can utilize the existing IP network in campus.

Advantages

- ① Each client can be addressed individually.
- ② Can utilize the existing IP network in campus.
- ③ Scalable - Adding a new client is simple as long as there is network connectivity - No load problems.

Advantages

- ① Each client can be addressed individually.
- ② Can utilize the existing IP network in campus.
- ③ Scalable - Adding a new client is simple as long as there is network connectivity - No load problems.
- ④ Have an option to build interactive systems.

Advantages

- ① Each client can be addressed individually.
- ② Can utilize the existing IP network in campus.
- ③ Scalable - Adding a new client is simple as long as there is network connectivity - No load problems.
- ④ Have an option to build interactive systems.
- ⑤ Provision for remote access.

Advantages

- ① Each client can be addressed individually.
- ② Can utilize the existing IP network in campus.
- ③ Scalable - Adding a new client is simple as long as there is network connectivity - No load problems.
- ④ Have an option to build interactive systems.
- ⑤ Provision for remote access.
- ⑥ Easy modification of plans - No hard circutes.

Products Currently Available

1 xyz

No Free Software products exist, Though almost all core components are available in a compatible licence.

Block Diagram

Protocols

- 1 The **Session Initiation Protocol (SIP)** is an IETF-defined signaling protocol widely used for controlling communication sessions such as voice and video calls over Internet Protocol (IP). The protocol can be used for creating, modifying and terminating two-party (unicast) or multiparty (multicast) sessions.

Protocols

- ① The **Session Initiation Protocol (SIP)** is an IETF-defined signaling protocol widely used for controlling communication sessions such as voice and video calls over Internet Protocol (IP). The protocol can be used for creating, modifying and terminating two-party (unicast) or multiparty (multicast) sessions.
- ② **RTP** provides end-to-end network transport functions suitable for applications transmitting real-time data, such as audio, video or simulation data, over multicast or unicast network services. (*RFC 3550*)

Asterisk

Asterisk is a software implementation of a telephone private branch exchange (PBX); it was created in 1999 by Mark Spencer of Digium. Like any PBX, it allows attached telephones to make calls to one another, and to connect to other telephone services including the public switched telephone network (PSTN) and Voice over Internet Protocol (VoIP) services. Its name comes from the asterisk symbol, *.

Asterisk thus essentially can act as a SIP proxy for routing the IP multicast transport we needed to implement.

Working

Challenges

- 1 Development of software for transmission and receiver.
- 2 Development of a streamlined approach for configuring Asterisk PA System.
- 3 Implementation and Testing.

Expenditure

- Consumables
 - Network equipments Rs. 1500
 - Import charges on equipment Rs. 7000
 - Misc Charges: Rs. 1000
- Equipments
 - IP Phone Rs. 5000
 - IP speakers x2 Rs. 10000
 - Digium FXO cards - 1TDM410PLF Rs. 10000
- Research Literature - Rs. 3000
- Others
 - Uplink to telephony provider to test remote link. (college PBX)
- Contingencies Rs. 1000.
 - Rs. 4000 in case IP speakers are not available.

Total Cost: Rs.42500/-

Real World Implementation: Add cost of each client needed.
